Full members £15

Student members £5

Geology for Global Development News - from Joel Gill (via Jim)

You will have seen in the last Newsletter and the note on the LGS website about our LGS partnership with GfGD. GfGD are in the process of planning some meetings and events this year, as well as starting a new project focused on sustainability of water resources in Tanzania. Members may be interested in this blog (<https://blogs.egu.eu/network/gfgd/2019/01/31/geology-for-global-development-our-highlights-from-2018-and-plans-for-2019/>) which gives a summary of some of the highlights in 2018 and plans for 2019.

Geology for Global Development | Geology for Global Development – Our Highlights from 2018 and Plans for 2019

[blogs.egu.eu](https://blogs.egu.eu)

We have a busy year ahead of us, helping to put sustainable development at the heart of geoscience events, training and practice, and advocating for the importance of geoscience in tackling global challenges. Here's an overview of our plans, and some highlights from 2018. Geology for Global Development (GfGD) is a registered charity in England and Wales (Charity Number 1165663), working internationally to champion the role of geology in sustainable development. Working in partnership with many other organisations, we are mobilising and reshaping the geology community to help deliver the UN Sustainable Development Goals (SDGs). We have four key priorities: INSPIRATION. Promote the value of geology in supporting sustainable development. EDUCATION. Equip geologists to engage positively in sustainable development. ACTION. Enhance the application of geology to international development. LEADERSHIP. Exercise international leadership on matters relating to geology and sustainable developo

At the end of last year they also published a briefing note with The Geological Society of London and British Geological Survey that outlines the role of geoscience in development, written for a general audience (<https://www.geolsoc.org.uk/sustainabledevelopment>). For those that missed the talk last year, this may be a useful summary.
